

# At-Home COVID-19 Test

# **INSTRU** USER RUCTIONS

For Emergency Use Authorization (EUA) only. *In vitro* diagnostic use only.

Scan QR Code with phone camera to learn more or visit **quickvueathome.com**.

# Wash Your Hands

Before you start testing, wash your hands or use nand sanitizer

STEP 1 Check Your Test Kit

It is recommended gloves (not provided) also be used during testing. Locate the kit components:

STEP 2

Remove cap from one TUBE and place it in the TUBE HOLDER.

Tubes

Tube Holder

# Swab the Nostrils

Gently insert the **SWAB** ½ to ¾ of an inch into the nostril, depending on the size of the person's nose. Firmly rub the **SWAB** in a circular motion around the inside wall of **EACH NOSTRIL at least 4 times**.

A Immediately place the **SWAB** into the liquid inside the **TUBE**, and ensure

B Leave the swab in the solution for **ONE MINUTE** 

it is touching the bottom. Stir 3-4 times.

NOTE: If the swab is in the solution for more than 10-minutes it should not be used.

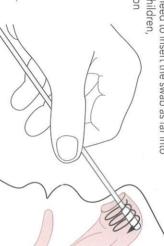

3-4x

Place Swab in the Tube

# Be sure to rub BOTH nostrils with the SAME SWAB.

NOTE: If you are swabbing others, please wear a face mask. With children, you may not need to insert the swab as far into the nostril. For very young children, you may need another person to steady the child's head while swabbing.

**NOTE:** Failure to swab properly may cause false negative results.

## Watch or Timer (not included) STEP 4

### Test Strips

### STEP3

W

Remove the **SWAB** from its wrapper, being careful not to touch the **SWAB** head.

# STEP 6

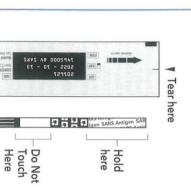

B Dispose of swab in the trash. Open the **TEST STRIP** pouch carefully at the slit and hold the **TEST STRIP** as indicated. pen the Test Strip

A fter **ONE MINUTE**, remove the swab from the **TUBE** by

nove Swab from the

rubbing the swab head against the inside wall of the tube to squeeze

STEP 5

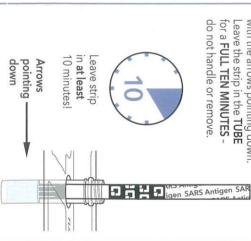

## STEP 7

STEP 8

Leave swa in **at least** 1 minute!

Remove Test Strip from the Tube

Place the **TEST STRIP** into the **TUBE** with the arrows pointing down. with the arrows pointing do Leave the strip in the TUBE for a FULL TEN MINUTES -Place Test Strip in the Tube

### STEP 9

# Check Your Results

There are three type of results possible.

1. Check for a Positive Result

2. Check for a Negative Result

3. Check for an Invalid Result

### STEP 10

# Check for a Positive COVID-19 Result

Place the **TEST STRIP** on the test strip outline below and compare with test result examples shown.

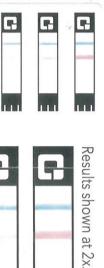

# Positive Result

A POSITIVE result must show BOTH a BLUE line and a PINK line near the BLUE line.

Look closely! Even a very faint, pink Test Line and a blue Control Line is a POSITIVE result. The intensity of the lines may vary.

3

# Positive COVID-19 Result

A positive test result means that proteins from the virus that causes COVID-19 were found in your sample and it is very likely you have COVID-19 and it is important to be under the care of your healthcare provider. It is also likely that you may be placed in isolation to avoid spreading the virus to others. There is a very small chance that this test can give you a positive test result that is wrong (false positive.) If you test positive with the QuickVue At-Home OTC COVID-19 Test you should self-isolate and seek follow-up care with your healthcare provider as additional testing may be necessary. Your healthcare provider will work with you to determine how best to care for you based on your test result along with your medical history, and your symptoms.

# OTC **COVID-19** Test At-Home

For Emergency Use Authorization (EUA) only

Continued from other side

Check for a Negative COVID-19 Result

Place the **TEST STRIP** on the test strip outline below and compare with test result examples shown.

A **NEGATIVE** result will show a **BLUE** line but **NO PINK** line. Negative Result G

# Negative COVID-19 Result

A negative test result means that proteins from the virus that causes COVID-19 were not found in your sample.

though the test is negative. If you test negative and continue to experience COVID-19 like symptoms of fever, cough and/or shortness of breath you should seek follow up care with your healthcare provider. Your healthcare provider will consider the test result together with all other aspects of your medical history (such as symptoms, possible exposures, and geographical location of places you have recently traveled) in deciding how to care for you. For example, your healthcare provider may suggest you need another test to determine if you have contracted the virus causing COVID-19. It is possible for this test to give a negative result that is incorrect (false negative) in some people with COVID-19. This means that you could possibly still have COVID-19 even

It is important that you work with your healthcare provider to help you understand the next steps you should take.

Results shown at 2x

Place the **TEST STRIP** on the test strip outline below and compare with test result examples shown.

an Invalid COVID-19 Result

STEP 13

Used Test in the Trash After completing all steps, wash hands or use hand sanitizer.

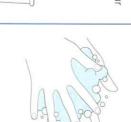

If at 10 minutes, the blue Control Line does not appear, even if any shade of pink to-red Test Line appears, the result is invalid. If the Test Result is invalid, a new swab should be collected, and the test should be performed again with a new pre-filled tube and Test Strip.

Invalid COVID-19 Result

If the second QuickVue At-Home OTC COVID-19 Test is also INVALID, call 833-QUICKVUE (833-784-2588) for assistance.

# **Invalid Result** G Results shown at 2x 1

If there is **NO LINE**, or if there is **ONLY** a **PINK** line, the test is **INVALID** and you should repeat the steps starting at the beginning using a new **TUBE**, **SWAB**, and **TEST STRIP**. Please notify your healthcare provider of the results of your QuickVue At-Home OTC COVID-19 Test.

A second test should be obtained with at least 24 hours (and no more than 36 hours) between tests. G

# ntended Use

authorized for non-prescription self-use and/or, as applicable for an adult lay user testing laboratory setting. The QuickVue At-Home OTC COVID-19 Test is only for use under the Footprization.

What do I need to know about Results from Serial Testing? If your first or second test is positive, then proteins from the virus that causes COVID-19 has been found in your sample and you likely have COVID-19. If you test positive with the QuickVue At-Home COVID-19 Test, you should self-isolate and seek follow-up care with your healthcare covide to determine the next steeps you should take. You may need additional testing depending on your personal health history and other factors.

Your first test is negative, you should test again in 24-36 hours. If both your first and second tests are negative, you may not have COVID-19, however, you should follow-up with your healthcare provider if you are at high risk for COVID-19 infection. If you test ne nd continue to experience COVID-19 like symptoms of fever, cough and/or shortness of breath you should seek follow up care with

Frequently Asked Questions
Will this test hurt?

ot sharp and it should not hurt. Som stop the test and seek advice from a

What are the known and potential risks and benefits of this test?

- ther information, can help your healthcare provider mak by help limit the spread of COVID-19 to your family and about your car

What is Serial Testing?

COVID-19 Serial testing is when one person tests themselves multiple times for COVID-19 on a routine basis, such as every day or every other day. By testing more frequently, you may detect COVID-19 more quickly and reduce spread of infection.

What is the difference between an antigen and mo An antigen test, such as the QuickVue At-Home OTC COVID-19 Test, detects proteins from the virus. Antigen tests are very specific for the virus, but not as sensitive a result is highly accurate, but a negative result does not rule out infection. If your test result healthcare provider on whether an additional test is necessary and if you should continue.

How Accurate is this Test? Based on the interim results of a clinical study where the QuickVue At-Home OTC COVID-19 Test was compared molecular SARS-CoV-2 test, QuickVue At-Home OTC COVID-19 Test correctly identified 83.5% of positive spe ed to an FDA authorized pecimens and 99.2% of

and for serial

Assistance

The solution in the tube contains hazardous ingredients (see table above). If the solution contacts the skin or eye, flush plenty of water. If irritation persists, seek medical advice. https://www.poison.org/contact-us or 1-800-222-1222
